VOLXHOLDS présente sa nouvelle gamme de volumes bois ; élaborés à partir de panneaux de contreplaqué de bouleau en 21 mm/15 plis, passés en usinage de précision sur une machine CNC 3 axes à commande numérique, les découpes sont ensuite montées et collées sans armatures intérieures, avec renforts de résine fibrée, et les arêtes sont soigneusement arrondies ; la texture à grain moyen apposée procurera longévité de texture, et grip efficace non agressif. Les inserts M10 pouvant accueillir les prises rapportées sont en fer forgé. Toutes les longueurs de cotés sont compatibles entre les différents volumes, permettant des assemblages bord à bord, ou des empilements efficaces et esthétiques. Nombreuses formes sont complémentaires pour concevoir de plus gros modules et apporter ainsi de la variété et de la technicité à vos profils.

Introducing VOLXHOLDS's new range of wood volumes ; Made of 21 mm/15 layers birch plywood, cut with 3 axis CNC machine, panels are mounted and glued without inside trusses, with fiber resin reinforcement. Aretes are rounded, texture is medium grain for long lasting resistance, and smooth but efficient grip. Inserts are steel forged. All length align one to another with numerous other volumes from the range, allowing designs in lines or piles, exciting and graphical. Many shapes are made to fit together to create even bigger modules to bring even more variety, fun and technicity to your profiles.
